

POSITION: MOBILE QA ENGINEER

LOCATION: LOS ANGELES, CA

WHO WE ARE

Acuant is a next gen Identity Verification Platform that reduces fraud while providing a seamless customer experience. Award-winning products include ID capture and auto-fill software and ID authentication with the industry's highest speed and accuracy rates. Solutions are deployable via web services (cloud), mobile and desktop applications. Acuant also offers Chip and e-Passport authentication with PKI, facial recognition software and manual review of IDs.

Holding more than 20 patents and powered by human-assisted machine learning, Acuant possesses the industry's largest ID library and has completed more than 3 billion transactions worldwide. Partners include Fortune 500 and FTSE 350 organizations and start-ups in all industries. For more information please visit WWW.ACUANTCORP.COM.

WHAT WE LOOK FOR

We are seeking a Mobile QA Engineer to join our team and lead the QA process for our products on different Mobile platforms such as iOS, Android, ReactNative, Cordova, Xamarin etc. Although the team has some QA processes in place, we have never had a dedicated QA resource, so this is an opportunity for a qualified candidate to substantially define and own the QA process for apps used by millions of customers each year.

We are seeking engineers who are innovative, resourceful and passionate about mobile products. It's über important to us that we hire top-notch engineers; not just someone who can code, but someone who's curious and is always game to try new things. Not only are you an excellent programmer, you are also someone who sincerely enjoys the art of finding sophisticated and efficient ways of solving problems.

All candidates must be:

- Experienced in the field of mobile QA, with a portfolio of popular, active applications that you've helped to maintain
- Proficient at clear, concise written communication
- Highly self-motivated
- Obsessively detail-oriented

WHAT YOU BE RESPONSIBLE FOR

Daily responsibilities will vary, but will include:

- Working with the team to develop standards for measuring product quality and readiness to release
- Owning the QA workflow from story conception to software deployment
- Creating, maintaining, and executing automated and manual test cases that implement our standards

- Detecting, isolating, reproducing, documenting, and prioritizing defects
- Reporting those defects to the team and verifying fixes
- Scheduling and executing routine regression testing prior to releases
- Testing new features and enhancements across various devices and scenarios

Bonus if familiar with:

- Popular native mobile automation and testing technologies, including Espresso and UI Automator for Android, and XCUITest and UIAutomation for iOS
- CI tools such as Jenkins, Travis CI, etc
- Firebase Test Lab

HOW WE VALUE OUR EMPLOYEES

- You will always be heard, decisions are collaborative
- Competitive compensation
- Challenging and rewarding work
- Generous benefits package
- Work with an incredible team of smart and mission-driven people
