

Acuant Face™

Acuant Face allows you to seamlessly onboard on all channels (remote or on premise).

- ✓ Increase conversion rates
- ✓ Enhance security & prevent fraud
- ✓ Meet KYC & AML requirements

Secure, Fast & User Friendly Facial Recognition

Acuant Face™ software performs biometric facial recognition and liveness detection to prevent identity theft and fraud. A user simply captures an image of their government issued ID and then takes a selfie. The selfie image is compared to an extracted photo from the identity document such as a driver's license or passport to verify a match. Acuant Face integrates with **Acuant AssureID™** for seamless multi-factor authentication.

There are two results returned from Acuant Face in seconds: a facial match score that shows how closely the two images match and a liveness detection test to ensure genuine presence of that person. Our technology is able to ensure physical presence of the individual and to thwart deep fakes and presentation attacks, such as image spoofing - **all under 3 seconds**.

Acuant Face has three classes with easy integration and the ability to white label:

Acuant Face: Standard

Designed for businesses seeking biometric facial recognition matching. Ability to be paired with on device liveness detection blink test for one seamless process. Provides businesses with fast and accurate results when convenience and user experience come first.

Acuant Face: Government

Designed for heavily regulated industries or governments seeking compliance and security. Uses algorithm that has undergone rigorous face recognition testing administered by US National Institute of Standards & Technology (NIST) meeting stringent standards. Paired with on device liveness detection blink test.

Acuant Face: Enhanced

Designed for high risk environments, those seeking utmost certainty and fraud prevention. High performance facial recognition matching paired with server based enhanced liveness detection. Prevents presentation attacks from printed images, masks, recorded video or synthetic video from passing the liveness check. Ability for replay detection where a similar face presented in quick velocity triggers an alert to possible fraudulent activity.

Acuant Face™

Quick & Easy Multi-Factor Authentication

Robust Liveness Tests to Catch Fraud

Fast Facial Recognition Built to Scale

Acuant offers a solution for every use case and problem you want to solve when it comes to identity verification. Our products work for any industry and level of risk to provide maximum ROI. All workflows are privacy minded, engaging encryption in the cloud with no images or data being stored.

SUPPORTED DOCUMENT TYPES

Coverage of 196+ Countries

Passports / ePassports
Passport Cards
Driver's Licenses

Visas
Military Identification
Voter Identification

Government (PIV, CAC, TWIC)
Alien Registration
Border Crossing Cards

SECURE

All data is encrypted, nothing is stored on devices or cloud to protect PII

MULTI-PLATFORM

Mobile/Web/Cloud solutions for any device & operating system

EASY INTEGRATION

Easy deployment in any environment, as partial or whole solution

Why Choose Acuant Face

- We provide security via encrypted facial match and liveness testing in the cloud that is validated using tokens.
- Acuant Face is privacy minded, meets GDPR requirements and ISO 27001 certified.
- Acuant Face + Acuant AssureID world class document authentication create a best in breed solution with easy integration and a developer friendly SDK.
- Acuant Face is omnichannel, supported in iOS, Android and HTML. Deployable on smart devices, desktops and kiosks.
